MEMORANDUM FOR DIRECTOR, BUSINESS MANAGEMENT AND SYSTEMS INTEGRATION (BMSI), OUSD (Comptroller)

SUBJECT: Installations and Environment Domain Business Systems Compliance Plan

In response to the Comptroller Systems Investment Certification/Approval memorandum dated July 16, 2004, and the BMSI email request dated July 30, 2004, we are submitting our business systems compliance plan for the review of systems meeting the memo's and e-mail's criteria based on the Information Technology Management Application (ITMA) for Fiscal Year 2005.

The Air Force Automated Civil Engineer System (ACES) is the only system on the ITMA list that the Installations and Environment (I&E) Domain has identified for review. Out of the four other systems listed in the ITMA, three entries, Engineering and Installations - Pacific Air Force (E&I-PACAF), Engineering and Installations - Air Force Material Command (E&I-AFMC), and Engineering and Installations - Air Force Combat Command (E&I-ACC) do not meet the definition of a system. Also, these three systems deal with electronics and telecommunications equipment, operating forces, and administrative and service wide activities which are not capabilities of our domain. The fourth, the Installation Support Module (ISM), should be transferred to the Human Resources Management (HRM) Domain. The HRM agrees.

We plan to complete our review of FY05 ACES funding before allocation of FY05 resources is made to the Air Force in Q1 FY05.

We will update this schedule when we receive more detailed financial data for additional I&E Domain systems listed in the Component Support of DoD IT Portfolio Review Process data call due August 17, 2004, or the January 2005 data call.
